Work place safety or ADA compliance, I-Tech™ Non-skid Flooring Panels were developed for use across a range of applications where slip resistance is needed. Stadiums, mezzanines, stage flooring, marine and other industrial settings, Innovative Panel Technologies' exclusive I-Tech™ Non-Skid Flooring Panels can be matched to I-Tech™ Anti-Static Panels, I-Tech™ Mezzanine Panels and I-Tech™ Stage Panels to deliver the non-skid properties necessary in wet or dry conditions along with a range of other attributes for specific applications and settings.

I-Tech™ Non-Skid Flooring Panels combine a structural plywood substrate with a high performance thermoplastic laminate textured with an exclusive slip resistant Quad Ripple finish. Sturdy, long-wearing and attractive, these panels are available in a range of colors, thicknesses and attributes tailored to your specific application.

I-Tech™ Non-Skid Flooring Panels exceed OSHA (Occupational Health & Safety Administration) and ADAAG (Americans with Disabilities Act Accessibility Guidelines) standards. OSHA recommends for flat surfaces a minimum Coefficient of Friction (COF) of 0.5 while ADAAG minimum standard for COF is 0.6. I-Tech™ Non-Skid Flooring Panels achieved a COF of .84 in testing using the Horizontal Dynamometer Pull-Meter Method conducted by Progressive Engineering in November 2011. I-Tech™ Non-Skid Flooring Panels also exceed the ADAAG COF standard for use in ramps which is .080.

Like all I-Tech™ materials, I-Tech's proprietary poly laminate provides a superior wear surface, features a 100% moisture barrier that is impervious to most chemicals and is available in fire-rated plywood, OSB, high density particle board and other substrates as required. Tongue-and-groove or precision square edge machining is also available on two or four edges for easy installation.

Innovative Panel Technologies can provide the guidance, assistance and experience you need in selecting the appropriate panel for your specific application. Issues related to wear, span requirements, useful life and maintenance can and should be discussed in meeting your requirements and needs precisely.

I-Tech™ Non-Skid Flooring Panels deliver superior non-skid properties and are available in a range of thicknesses and colors.

Why IPT?

- **Experience is the difference.** With hundreds of installations across dozens of industries and applications, Innovative Panel Technologies wields uncommon expertise in meeting the demands of any panel-related project.
- **Tailored solutions.** IPT delivers tailored products designed expressly to meet your project needs. Elements like span requirements, fire retardant ratings, weight, wear, surface texture, tolerances, strength and longevity are all a part of the panel solution we develop on your behalf.
- **Budget parameters.** With so many material solutions available to IPT we can meet most any budget with precisely the right material for the application. You'll find our wide range of panel options and purchasing strength provides substantial cost benefits over comparable products.
- **Free design services.** You won't pay more for IPT's expertise. That's why IPT customers keep coming back. IPT works hand-and-glove with your project to design precisely the right product for your application...all at no additional cost to you.
- **Shipping always at net cost.** IPT mitigates your shipping costs by charging their net cost to ship to you. Our net cost shipping policy is your assurance you're getting the best buy on IPT products.
